PRODUCT DESCRIPTION

Gianfranco Frattini

Very rare pair of 75" Gianfranco Frattini floor lights from the 1970's- sold individually.

Absolutely cool and stylish floor lamps that seem to derive from the post modern era but are in fact inspired by radical design approaches from the 1960's (by Superstudio or also Gino Sarfatti)

This pair of large lamps with 75" in height is in astonishingly well preserved condition.

They cast a beautiful light and are great for accentuating any space - especially as a pair.

Frattini used a simple steel mesh to form a S-shaped self-supporting steel-structure or wave that was then powder-coated black.

The opaline glass tubes can be hung in a variety of places, which is a very subtle and beautiful idea. These hand blown opal glass shades are perfectly fitting the structure.

The overall condition is very good, the bases show minimal wear, the structure basically none wear at all and the glass tubes are immaculate.

We have an identical pair available, they will sell individually, but would prefer to let go as a pair as they are just so great as a pair in a room together.

Each light takes one large e26/27 bulb with 100W max, leds are possible.

Both lights are dimmable with a foot switch.

Dimensions: 74.8" (height) x 15.74" (diameter foot).
